RETAIL SALES ANALYSIS & DATA COLLECTION IMPROVEMENT PLAN

Shah Store - Watch Sales Analysis

Prepared by: Safina Shah

Reporting Period: Sep 2025 - Jul 2026

Objective

This report analyzes Shah Store's watch sales data to understand customer buying patterns, product demand, revenue trends, and payment preferences. It also recommends improvements to data collection so that future analysis - including profit and supplier performance - can be more complete and reliable.

Executive Summary

Shah Store recorded revenue of ₹34.97 lakh between January and July 2026. Rolex was both the best-selling and highest revenue-generating brand. Monthly revenue fluctuated over the period, peaking in June 2026. The analysis also identified clear opportunities to strengthen inventory planning, customer tracking, and data collection going forward.

Key Metrics

Total Revenue (Jan-Jul 2026)	Rs. 34,97,486
Sales Records with Selling Price	325
Total Watches Sold (Order Sale)	809
Unique Watch Models Sold	57
Best-Selling Brand	Rolex
Highest Revenue Month	June 2026 - Rs. 10,93,128
Lowest Revenue Month (complete months)	March 2026 - Rs. 3,08,200
Most Common Payment Mode	PP
Most Frequent Customer	Aas Mohammad

Assumptions and Limitations

- February 2026 data is not available.
- Selling prices were not recorded for September-December 2025 orders; revenue analysis is therefore limited to January-July 2026.
- A small number of invoices record one combined total for multiple watches. Product-level revenue could not be split for these invoices, though manual review confirmed this does not change the top-performing brands.
- Customer names were recorded only from April 2026 onward, so customer analysis reflects that period only.
- The Master Sales Table and the Order-Sale Table were maintained at different levels of detail and were analyzed separately to preserve accuracy.

Product Analysis

Revenue by Watch Brand

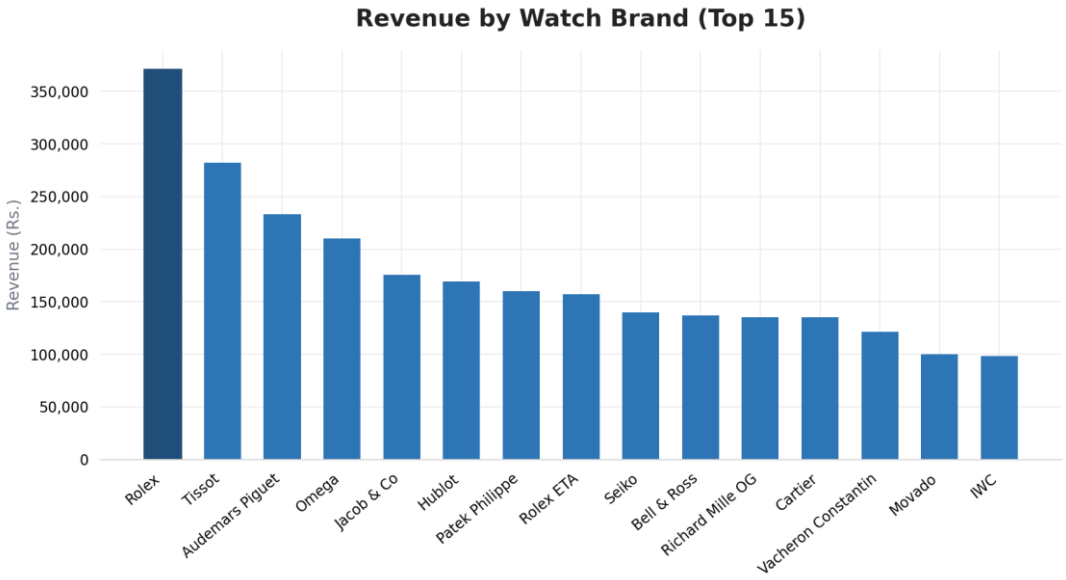

Figure 1: Revenue by watch brand, top 15 (Rs.)

- Rolex is both the best-selling and highest revenue-generating brand, reflecting strong and consistent demand.
- Omega ranks second in units sold but fourth in revenue, suggesting a lower average selling price than the top brands.
- Audemars Piguet sells in smaller volumes but ranks third in revenue, showing that a small number of high-value sales can contribute significantly to overall revenue.

Time Analysis

Monthly Revenue Trend

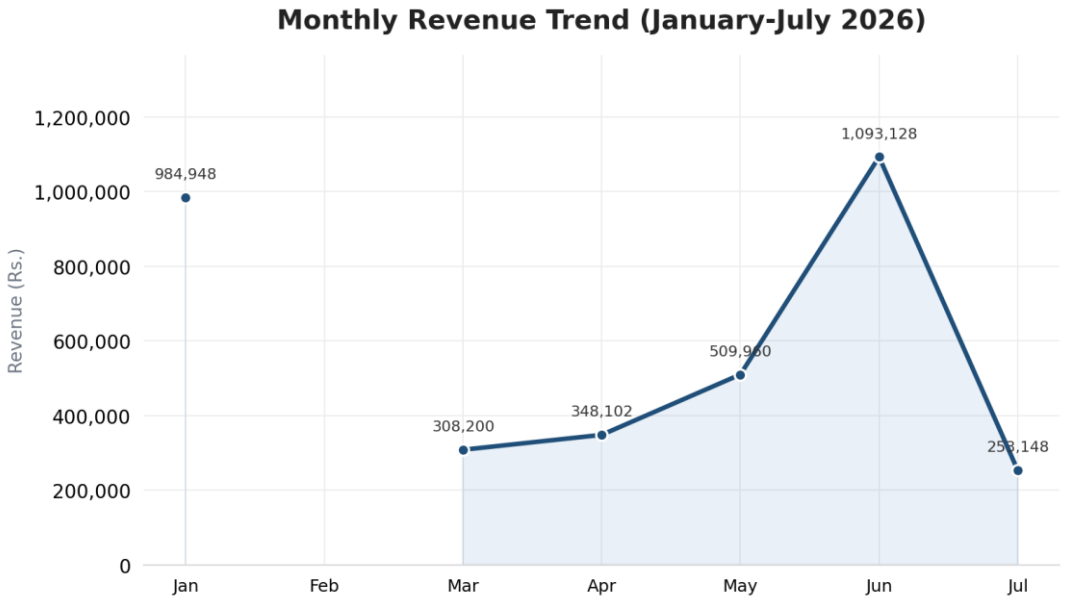

Figure 2: Monthly revenue, January-July 2026 (Rs.)

- Revenue fluctuated over the period rather than following a steady trend, peaking in June (Rs. 10,93,128) and falling to its lowest in March (Rs. 3,08,200).
- The dataset covers only seven months of revenue data, which is not sufficient to draw reliable conclusions about seasonality.

Units Sold by Month

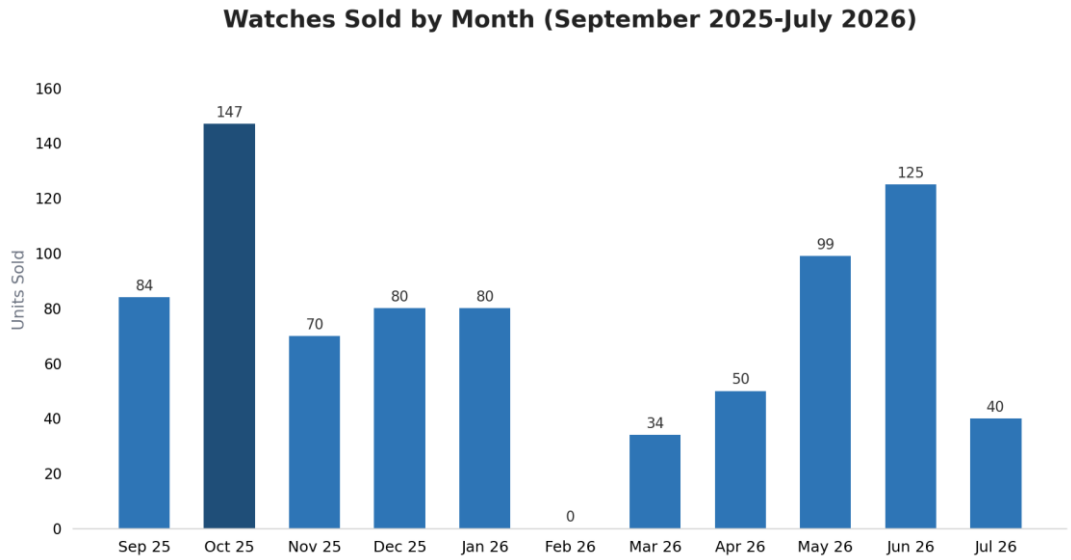

Figure 3: Watches sold by month, September 2025-July 2026

- October 2025 was the best-selling month (147 units), followed by June 2026 (125 units).
- March 2026 was the weakest month for both units sold (34) and revenue, making it a priority for review.

Customer Analysis (April-July 2026)

Top Repeat Customers

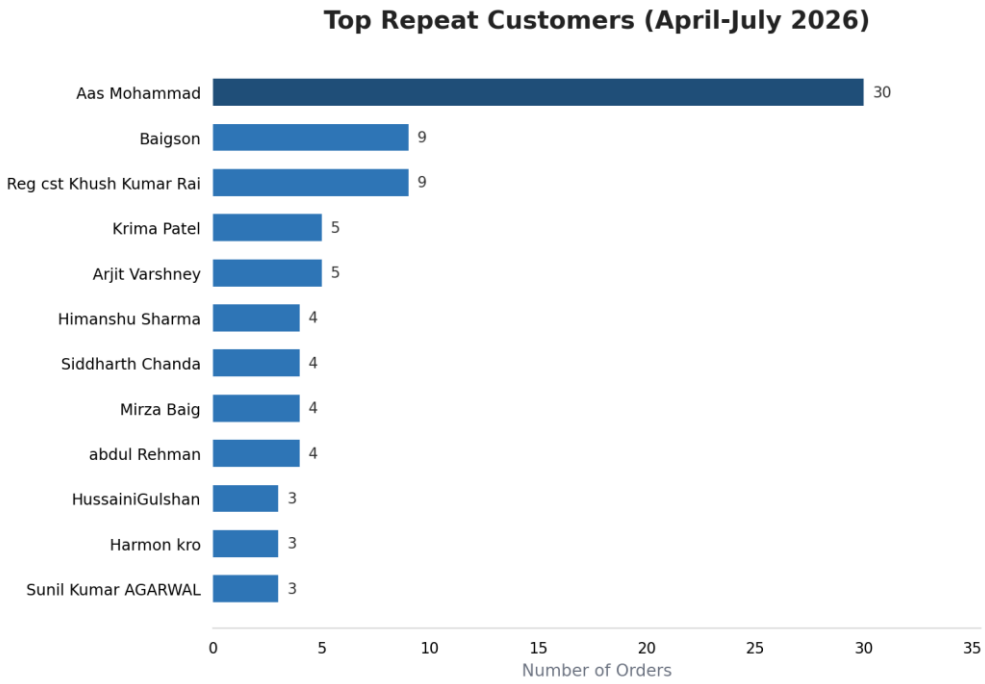

Figure 4: Customers with the most repeat orders, April-July 2026

- Aas Mohammad is the most frequent customer, with 30 recorded orders - well ahead of all others.

Top Customers by Revenue

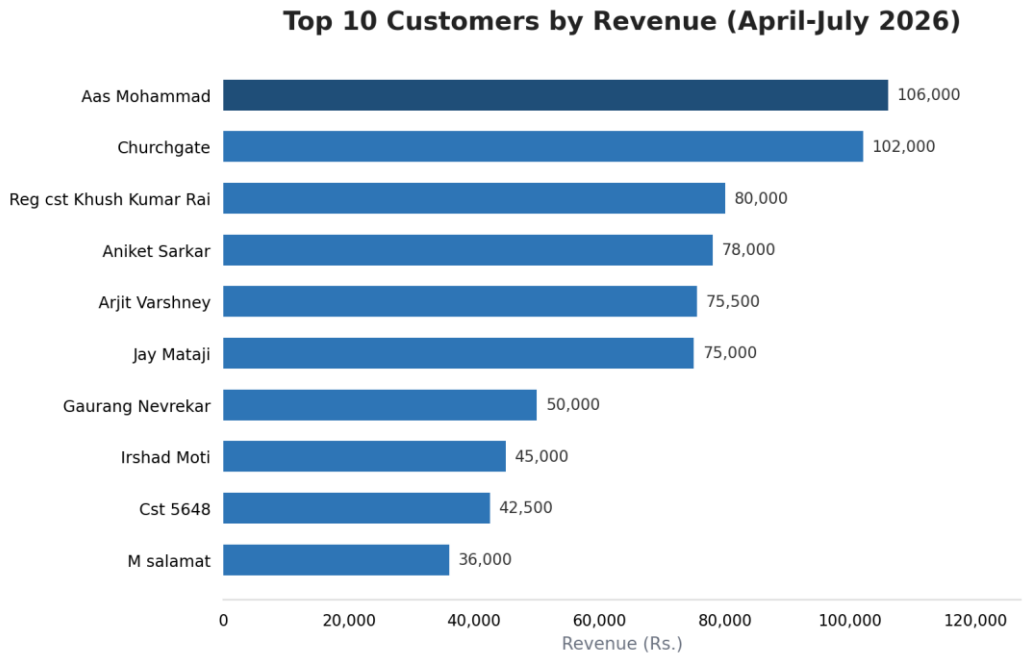

Figure 5: Top 10 customers by revenue, April-July 2026 (Rs.)

- Aas Mohammad is also the highest revenue-generating customer, consistent with their order frequency.

Payment Mode Analysis

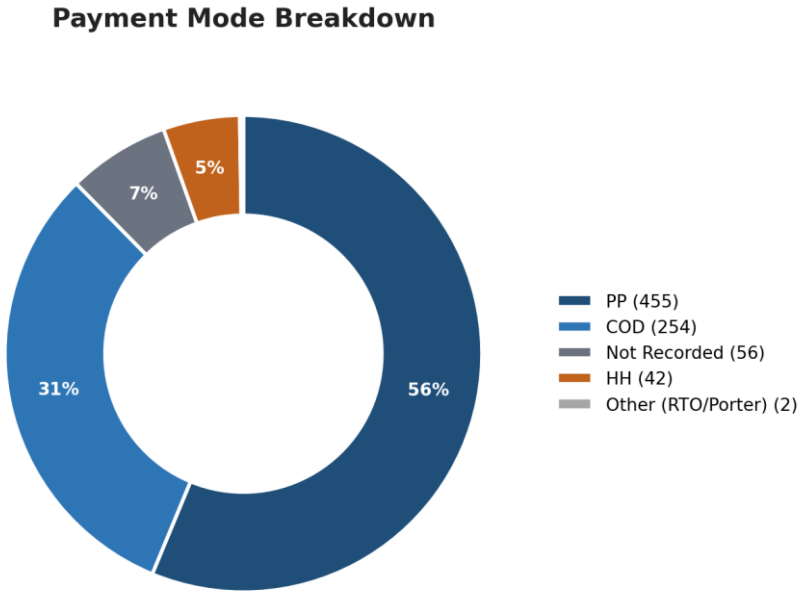

Figure 6: Share of orders by payment mode

- PP is the most common payment mode (455 orders, 57%), followed by COD (254 orders, 32%).
- Payment mode was not recorded for 56 orders (7%); closing this gap would improve future reporting accuracy.

Recommendations

1. Prioritize inventory for top-selling brands

Rolex, Omega and Tissot account for the largest share of units sold. Stock levels should be planned around this demand rather than allocated equally across brands, to reduce missed sales.

2. Manage premium brands by value, not volume

Audemars Piguet and similarly priced brands sell in low volumes but contribute disproportionately to revenue. Stock these carefully, tracking sell-through rather than unit count alone.

3. Investigate March's underperformance

March 2026 recorded the lowest revenue and unit sales among complete months. Review stock availability, promotions, and customer enquiries during that month to identify the cause.

4. Study and replicate June's performance

June generated the highest revenue of the period. Reviewing what drove it - stock availability, promotions, or seasonal demand - can help replicate the result in future months.

5. Introduce a simple loyalty program

Frequent customers such as Aas Mohammad (30 orders) represent a valuable, repeatable revenue base. A lightweight loyalty benefit - priority service, early access, or a small discount - can help retain them.

6. Close the payment-tracking gap

PP and COD together cover 89% of orders and should remain the primary supported methods. The 7% of orders with no payment mode recorded should be investigated and the entry process tightened.

Recommended Data Fields for Future Collection

Adopting the fields below would allow Shah Store to calculate profit (not just revenue), track supplier and staff performance, and analyze customers more accurately.

Field	Purpose
Invoice_ID	Gives every sale a unique identifier and enables order-level analysis.
Date	Already collected.
Customer_Name	Already collected.
Customer_Mobile	Identifies repeat customers accurately, even where names vary.
Watch_Brand	Simplifies brand-level analysis versus long model names.
Watch_Model	Supports analysis at the individual model level.
Quantity	Shows whether an invoice covers multiple units.
Selling_Price	Already collected.
Cost_Price	Enables profit calculation, not just revenue.
Profit	Can be calculated automatically from price and cost.
Supplier_Name	Identifies reliable suppliers over time.
Payment_Mode	Already collected.

Field	Purpose
Salesperson	Supports staff performance tracking.
Customer_Location	Identifies strong markets geographically.
Remarks	Captures special cases such as replacements or discounts.

Conclusion

This analysis shows that useful business insights can be drawn even from limited and incomplete records. Adopting the recommended data collection practices will allow Shah Store to perform accurate profit analysis, customer behavior analysis, inventory planning, and supplier evaluation going forward - supporting stronger, better-informed business decisions.
